assassins-creed-4-black-flag-kenways-fleet assassins-creed-4-black-flag-kenways-fleet Assassin's Creed 4: Black Flag - Trailer 4 - Ubisoft Assassin's Creed Rogue: Kenway's Fleet - Dead Men Tell No Tales of SWTOR. 4: Assassin's Creed IV: Black Flag - Crew. Assassin's Creed IV: Black Flag - Kenway's Fleet. The Comedy Central host has become a sort of cultural pundit over the years, attacking everything from men and equality to politics and television. His comedy is often extremely quotable, and his very on-point critique of media influences, including his own show, has helped elevate SNL into one of the most beloved shows in the nation. Matt has lived in New York City for more than a decade, and he is also the father of a young son, Jackson. Brian Rohan, a former SNL writer, produced the film. Matt has spoken about his divorce and the challenges of being a single dad to his son over the years, and his straightforwardness makes him an easy character to draw in the funny and messy world of Hollywood. Matt has become a producer, and was recently named chief creative officer of the firm Williams Street Productions. Q: Proper use of timezone and locale in PHP I am having some issues with timezones, they are definitely messed up. I am using the Locale to specify the current system locale, but it does not help. If the timezone for the current locale is correct, it doesn't work anyway. I am using "PHP_OS" to get the OS in use, and it outputs on my system: Linux 5.0.0-37-generic #44~18.04.1-Ubuntu SMP Wed Apr 24 12:06:31 UTC 2019 x86_64 x86_64 x86_64 GNU/Linux Which seems to indicate that the timezones are messed up as I still get the same time in Asia when I do: date_default_timezone_set(10); The full code: 648931e174

Store. Assassin's Creed IV Black Flag Cracked..Q: Brace initialization lists and unique_ptr I am trying to understand unique_ptr with braced initialization lists, e.g. unique_ptr ui{ new int{1}, &DeleteObject }; I understand that a normal brace initialization list would be used for any type other than a class. My question is: what is it doing in this example? A: We go to the braced-init-list part: new int{1} - creates a temporary int with initial value 1, &DeleteObject - calls a function DeleteObject which is a function template with two template parameters: object to delete and deleter function Now let's look at the deleter function: &DeleteObject - calls the pointer DeleteObject Let's look at the second parameter: DeleteObject - has an int parameter, i.e. int (some_function)(int). So in the end your code would be: unique_ptr ui{ new int{1}, some_function }; Q: Line-by-line copy of a text file I'd like to copy text from one file to another, line-by-line. The text is a serial number of an instrument, and I'd like

to make a backup file containing the file but with the serial numbers replaced with a ^X number, like: Text in file a.txt AB1234-1 AB1234-2 AB1234-3 AB1234-4 into Text in file
